Master of Science in Engineering "Diplôme d'Ingénieur"

Have a go at an innovative technology project!

If you are motivated, a complete entrepreneurial path is accessible to you throughout your engineering course, through innovative projects.

In addition to the steps proposed to all students, such as the creativity day scheduled in the first year or the Innovation project in the second year, it is also possible for you to nurture your own idea.

In your second year, you can choose a Teaching Unit dedicated to Innovation, then opt for the "Start-up Entrepreneur" project.

If your goal is to create your own start-up, this project will be the ideal starting point. You can actually launch your innovative business during a two-month internship at one of the IMT Atlantique business incubators!
You can earn credits while gradually acquiring the skills of engineering entrepreneurs, skills which are particularly appreciated in the business world.

IMT Atlantique offers you a personalized offer for your start-up innovation project.

Click here for more information about IMT Atlantique's incubators.
