Working with IMT Atlantique

Let's combine our skills for innovation and the competitiveness of companies.

The institution maintains and develops partnerships with companies, and the valorization of research is one of its primary missions. IMT Atlantique is involved in a network of partner entities from the socio-economic world that structure research, contribute to its orientation and facilitate its valorization. Collaborations initiated around research projects frequently evolve into permanent framework agreements or joint research structures, combining public and private resources and objectives.

In line with this mission, IMT Atlantique is a stakeholder in two academic Carnot institutes: Carnot TSN (Telecommunications and Digital Society) and Carnot MINES, which provide it with the means to develop its industrial contracting policy and to strengthen its fundamental research.

For many years now, the incubator created by IMT Atlantique has also opened up additional avenues of transfer to the socio-academic world by promoting the creation of start-ups from its laboratories.
