Master of Science in Engineering "Diplôme d'Ingénieur"

Let IMT Atlantique bring out the engineer in you!

IMT Atlantique offers high-level training courses that bring together digital technology, energy, environment and human and social sciences in an original way. IMT Atlantique offers you the ideal framework to become a high-level engineering graduate with the best skills, knowledge and know-how, paving the way to in-demand jobs all over the world.

Programme

A programme of skills development through innovative teaching methods. Acquire general engineering skills as you build your own study programme.

Majors

Enrich your profile starting in second year through a choice of areas of scientific and technical know-how: Healthcare engineering / Energy, nuclear and environmental engineering / Computer science and networks / Industrial engineering and organizations / Electrical engineering/robotics, electronics, automation, telecommunication and embedded systems. Discover majors.

Research Themes

Access to the heart of research through contact with research laboratories. At any time during your studies, the university's 12 research departments are open to you. Top research will enrich your curriculum.

Entrepreneurship and innovation

A complete entrepreneurial path is accessible to you throughout your engineering course.

A Multilingual, intercultural, internationally-oriented university

Multilingualism, interculturality and an international nature are part of the DNA of IMT Atlantique's engineering program. 190 academic partners including more than 50 dual degree agreements.
